

ABSTRACT

[0069] A mobile terminal having an MFD comprises a signal processor that outputs an analog signal and a control signal; a filter module in communication with the signal processor to output a filtered signal and an
5 unfiltered signal; and a switch in communication with the filter module and responsive to the control signal to output the filtered signal to the MFD when the control signal is at a first level, and to output the unfiltered signal when the control signal is at a second level.
